INTEGRATED SECURITY SOLUTIONS

ABOUT US

Founded in 2000, we have a track record of consulting, designing, implementing, and maintaining security solutions which include surveillance and safety systems, internal and external access control, and analytics.

SURVEILLANCE & SAFETY

We provide solutions for large and small developments which include retail shops, homes, shopping malls, offices, residential estates and schools.

Our indoor and outdoor solutions cater to a wide range of applications depending on your needs. These range from standard indoor cameras, to weather-proof, vandal-proof, and solar-powered cameras for remote locations. Software integration provides you with the ability to analyze and detect threats before they become an issue.

ACCESS CONTROL

We provide comprehensive access control solutions which cover both indoor and outdoor systems.

These include card access and bio-metric access systems like facial and fingerprint recognition. Systems can be integrated with multiple door controllers, turnstiles, and mantraps depending on your needs. We also provide thermal imaging cameras and devices for temperature scanning. Our outdoor access control systems include gantries for building access and carparks, as well as bollard systems for safety.

DIGITAL SOLUTIONS & VISITOR MANAGEMENT

Our solutions create additional value for your business. Using the information we collect in our surveillance and access control systems, we analyze data and movement records and provide insights to improve traffic and security.

We also provide technology and digital consulting for businesses looking to modernize and unlock potential for growth and efficiency.
